Earn badges and unlock functions the more you hydrate

4

Hydration status

Tilt your bottle to check your status.

If the **light turns green**, you are on the right track!

Orange means you're behind your goal and need to drink more water.

Rainbow lights will celebrate with you when you reach your daily goal

When you are behind your daily goal, the bottle will periodically remind you to drink water by blinking in the color of your choice and vibrating

5

Measurements

- Everything you drink through the bottle is measured and documented.
- The bottle performs measurements after every time that you open and close the cap and place it on a stable surface. Once a measurement is performed, the cap LED lights will blink once as an indication.
- If you notice an irregular measurement, wipe the lens inside the cap
